Group 7: Nima Ghaffari, Byeong Hyeok Jo, Gaurav Rana

Proposal:

- **Identify the business application and database.**
- **Identifying potential stakeholders**
- **Business scenario**

- A banking software that allows users to complete their banking needs, with some extra added features. The database planning to be used for this project will be mySQL
- Internal stakeholders would be the project manager, and project team (our group). And the external stakeholders would be the customers, clients, bank employees, and the branch manager.
- A bank app that completes all basic needs, this could be used in banks, however like all software's, it needs to be modified to fit the business needs. Planned utilities will include features such as: adding payees, paying bills, format authentication, account settings, and "printing" statements.
